SUMMARY

Software Engineer with 3 years of experience in Agentic AI, microservices, and AI-driven development. Skilled in building scalable, high-performance applications and integrating APIs across front-end and back-end systems.

SKILLS

Prompt Engineering, Chatbot Development, Ai Powered Tools, Node.js, Python

Bootstrap, Css, JavaScript, React, Typescript

EXPERIENCE

Junior Engineer

HEPL - CAVINKARE

02/2023 - Present, Cuddalore, India

- Working on AI/ML projects to drive automation, predictive insights, and product innovation.
- Integrated AI tools into microservices architecture, automating data processing workflows and reducing manual intervention by 40% across 3 enterprise applications using Python and Node.

EDUCATION

MCA

Bharathidasan University (ODL) • Tiruchirappalli, India • 2023 • 7.97

BSC Computer Science

St.Joseph's College of Arts & Science • cuddalore, India • 2021 • 6.3

PROJECT

Excel Extension

- Coded a browser tool to convert HTML table data into Excel files instantly in Government website, simplifying data analysis and improving reporting efficiency.

AI Chat Bot

dev.cavinkare.in/aidoc

- Built a conversational AI assistant leveraging NLP, Tensorflow, RAG and machine learning to automate tasks and improve internal communication, enabled real-time query resolution and productivity enhancements.

Indica Product Analyser

- Developed a Node.js-based application leveraging Google Teachable Machine to classify Indica vs.Non-Indica images.

RM & PM Extractor

uat.cavinkare.in/rm&pm-extractor/login

- Crafted an Node.js-based tool that allows users to upload ZIP files containing multiple PDFs with Rawmaterial (RM) and Packaging material (PM) information.
- It automatically processes the PDFs using REST APIs to extract texts using LLM Model from the pdf's based on client-required details and outputs them in a structured, usable format, reducing manual effort and saving time.

Invoice Number Extract

pod.cavinkare.in

- Built a full-stack web application designed for optical character recognition (OCR) of invoice numbers from uploaded images and PDFs.
- This application leverages OpenAI's powerful API for accurate and efficient OCR processing.
- All extracted data is persisted in a robust database to facilitate future dataanalytics and processing.

Product R&D

uat.cavinkare.in/product_randd/#/login

- Built a tool for the R&D team to record and manage employee product suggestions and sample analyses, with easy Excel export to reduce manual entry and improve efficiency.

Deployment Workflow

- Developed an AI-driven workflow tool that streamlines deployment and DB change requests between employees and the DevOps team, automating request handling, approval tracking, and team lead validations for efficient release management.

CERTIFICATIONS

AI Python for Beginners
